Introduction:

Rationale of the Problem:

GoSOLAR 2.0(GS2) is an upgraded version of the GoSOLAR software Georgia State University (GSU) uses. GS2 is a university portal designed to give students, faculty, and staff personalized access to wide-ranging campus resources in a single location. Current systems include no profile system for all its users; however, GoSOLAR 2.0 will be more user-friendly system that includes new features like student, faculty, and other user profiles. Current systems have interfaces that can only be accessed on a website, but GS2 will be a desktop application where any user can easily download and access without going to a website. Furthermore, a user in the current systems has no interface where they can pay any fee from any department at any time. GS2 will implement an interface that allows a user to pay any fees owed to any department in GS2 in just one payment interface.

The users on this system will include students, faculty of instructors and student teachers, administrator, and department of Financial Aid and Parking Services.

Rationale for Database and Database Chosen:

GS2 will use Java DB to rapidly store and load data. Java DB will be made up of tables in a relational database that consist of Students, Faculty, Departments, Profiles, and etc. The primary key to define each column of any user would be its unique user name that is only relevant to that single user. Also, numbering users from one to infinity in the database would also serve as a primary key to easily identify the user. Developers will use MySQL to interpret SQL code; java DB will be built base on SQL.

Software Architecture

GS2 will be an open layer architecture where each layer can access any of the layers or tiers below it. The desktop application GS2 will communicate directly to the java DB.

Rationale for Architecture

Need of a software architecture where a system of inheritance can be implemented. For example: users have common functionality, therefore other users will inherit these functions.

Also, because GS2 is designed to be a desktop application, it will communicate directly and easily with java DB. Lastly, a desktop application will further improve user usability, thus making it easily assessable by any user with a PC.

Rationale for Objects

Need of a system that supports multiple instances of the various users GS2 supports. Also, need of a system that supports multiple categories of users that include departments and faculty members; likewise, multiple instances or objects can be created from these categories.

Team Awesome

Requirements Elicitation

1.0 Introduction

GS2 shall be a desktop application. It shall be used exclusively for schools. GS2 shall be used to manage all the details that are involved in the registration process, and GS2 shall be an interface specially designed for each different type of user.

2.0 User Levels

GoSOLAR 2.0 supports seven types of users: The administrator, faculty, student, department of financial services, department of financial aid, department of parking services, and registrar.

2.1 Administrator

The administrator, like all other users, shall be able to log in. An administrator shall be able to add/remove students, faculty, courses, and departments. The administrator shall also be able to update faculty and student profiles, as well as course specific information and the calendar of events. Finally, the administrator shall be able to change their password.

2.2 Registrar

The registrar shall be able to log in to the department account. The registrar shall be able to update student profiles as well as the department profile.

2.3 Faculty

2.3.1 Instructors

Instructors shall be able to log in. Upon logging in, instructors shall be able to view their teaching schedules.

2.3.2 Student Teachers

Student Teachers shall be able to view teaching schedule. Also, Student Teachers shall have access to all functions of a normal student.

2.4 Students

Students shall be able to log in. Upon logging in, Students shall have a myriad of options, such as the ability to add/drop classes. They shall be able to pay fees via Payment and Fees. Students shall be able to view classes offered this semester. Students shall be able to view their current schedule for this semester.

Students shall have the ability to update their student profile, including emergency contacts, phone numbers, and their current mailing address. They shall be able to view their final exam schedule, and the courses completed so far. Lastly, Students shall be able to view forms, such as the “apply to graduate” form and a form to drop from the University.

2.5 Department of Financial Aid

The department of financial aid shall be able to log in to the department account. The department of financial aid shall be able to update student profiles. The department of financial aid shall also be able to update the department profile. Finally, the department of financial aid shall be able to view all available financial aid options.

2.6 Department of Parking Services

The Department of Parking Services shall be able to update any user profile. The Department of Parking Services shall also be able to generate tickets for users that have any violations tied to their account.

3.0 **General Functionality**

GS2 shall have options to back to previous location, back to main menu, log off, and program functions. GS2 shall have a main menu. The software shall also contain a help option.

3.1 Payment and Fees

The software shall keep track of a student’s balance. The student shall be able to pay by credit card, cash, money order, or check. The student shall be able to receive a refund when balance is negative. The student shall be able to pay for all fees from all departments in one single interface called “Payment and Fees”.

3.2 User Profiles

All users, except administrators, shall have a profile. All users, except administrators, shall be able to customize their own personal profiles. These profiles shall be able to be visible to anyone. The student profiles shall include name, age, major, preferred email, place of origin, gender, and phone number.

3.2.1 Faculty Profile

Instructor profile shall include name, age, area of research, preferred email, place of origin, schools attended, gender, and phone number. Student teacher profiles shall include name, age, area of research, preferred email, gender, phone number. Department profiles shall include

name of the department, department email, location on campus, website address, and phone number.

3.3 Calendar

GS2 shall contain a calendar of events on user login screen.

Entry #	Paragraph #	Description	Type	Use Case ID	Use Case Name
67	3.5.5.2	Student teacher profile shall include name, age, area of research, preferred email, gender, phone number.	SW		
68	3.5.6	Department profiles shall include name of the department, department email, location on campus, website address, and phone number.	SW		
69	3.6	GS2 shall contain a calendar of events on user login screen.	NTH		

Use Cases:

RTM Entry:	user login
Use Case ID: Use Case Name: Use Case Participants:	1 userLogin any and all users
Entry Condition:	users type in the account username and password on the login screen.
Flow of Events	<ol style="list-style-type: none">1. Users access the GS2 desktop application2. Users initiate login3. Log in menu pops up with User ID and User Password4. User enters the User ID and Password5. User will initiate the log in process
Exit Condition:	log off or close program.

Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.
---------------------	---

Rationale: To recognize which user is logged in to correctly allocate the correct functions to a specific user.

RTM Entry:	user password change
Use Case ID:	2
Use Case Name:	changePass
Use Case Participants:	any and all users
Entry Condition:	administrator activates Change Password option
Flow of Events	<ol style="list-style-type: none"> 1. User accesses the GS2 desktop application 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The log in process , if successful, takes the user to Main Menu 7. User will initiate the Update Administrative Password option
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: A need for users to have regular changes/updates to their password in order to avoid hack and intelligence leaks.

RTM Entry:	payment and fees.
Use Case ID:	3
Use Case Name:	paymentFees
Use Case Participants:	any and all users
Entry Condition:	user activates Payment and Fees option

Flow of Events	<ol style="list-style-type: none"> 1. User accesses the GS2 desktop application. 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The Log in process , if successful, takes the student to Main Menu 7. User will initiate the Payment and Fees option
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.

Rationale: Current systems do not have an easy to use interface to pay all fees set by GSU as a whole. This interface brings a need of a system where any user can pay any fee from any department in one single interface. This interface allows students to pay by any of the common means including credit card, check, and etc.

RTM Entry:	a specific user updates their own specific profile
Use Case ID:	4
Use Case Name:	updateProfile
Use Case Participants:	any and all users
Entry Condition:	user activates the Update Profile option
Flow of Events	<ol style="list-style-type: none"> 1. Users access the GS2 desktop application 2. Users initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. User will initiate the Update Profile option
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds

	<ol style="list-style-type: none"> The results can only be available for 10 minutes After 10 minutes the user should re log in to view the records
--	--

Rationale: Need of an option for a specific user to actively change and update their profiles.

RTM Entry:	users can update their specific phone number
Use Case ID:	5
Use Case Name:	updatePhone
Use Case Participants:	any and all users
Entry Condition:	user activates the Update Phone Number option.
Flow of Events	<ol style="list-style-type: none"> Users access the GS2 desktop application. Users initiate Student Login Log in menu pops up with User ID and User Password User enters the User ID and Password User will initiate the log in process The log in process if successful takes the user to Main Menu User will initiate the Update Profile option If successful, it will take the user to their specific profile User will initiate the Update Phone Number option
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> The results should be show within 5 seconds. The results can only be available for 10 minutes. After 10 minutes the user should re log in to view the records.

Rationale: Need of an option where users can update phone number. These phone number will available to all departments and administrator to contact a student.

RTM Entry:	user can update current mailing address.
Use Case ID:	6
Use Case Name:	updateAddress
Use Case Participants:	any and all users
Entry Condition:	users activate the Update Current Mailing Address option
Flow of Events	<ol style="list-style-type: none"> Users access the GS2 desktop application. Users initiate log in Log in menu pops up with User ID and User Password User enters the User ID and Password User will initiate the log in process The log in process if successful takes the user to Main Menu

	<ol style="list-style-type: none"> 7. User will initiate the Update Profile option 8. If successful, it will take the user to their specific profile 9. User will initiate the Update Current Mailing Address option
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.

Rationale: Need of an option where users can update mailing address. All university related mail is sent to this address. In current systems, no function allows a student to do this easily; therefore, in some cases, objects like refund checks will get send to wrong addresses.

RTM Entry:	GS2 shall contain a help option
Use Case ID:	7
Use Case Name:	helpOption
Use Case Participants:	all users
Entry Condition:	users activate Help option
Flow of Events	<ol style="list-style-type: none"> 1. User the GS2 desktop application 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the Help option
Exit Condition:	log off or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of a help option for general problems with fixes that users can view.

RTM Entry:	main menu
Use Case ID:	8
Use Case Name:	mainMenu
Use Case Participants:	any and all users
Entry Condition:	user login
Flow of Events	<ol style="list-style-type: none"> 1. User accesses the GS2 desktop application 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process
Exit Condition:	log off or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of a main menu to keep track of all the options a specific user can do in GS2.

RTM Entry:	back option
Use Case ID:	9
Use Case Name:	back
Use Case Participants:	any and all users
Entry Condition:	initiation of any options from the main menu
Flow of Events	<ol style="list-style-type: none"> 1. User accesses the GS2 desktop application 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The log in process, if successful, takes the user to the Main Menu. 7. User will initiate any option on the Main Menu.
Exit Condition:	log off, back, or close program

Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records
---------------------	--

Rationale: Need of an option for any and all users to go back to the previous window.

RTM Entry:	logoff option
Use Case ID:	10
Use Case Name:	logoff
Use Case Participants:	any and all users
Entry Condition:	user login
Flow of Events	<ol style="list-style-type: none"> 1. User accesses the GS2 desktop application 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The log in process, if successful, takes the user to the Main Menu. 7. (Optional) User can initiate any other options
Exit Condition:	close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for any and all users to go back to the user log in screen once they are finished with their session.

RTM Entry:	submit ticket to administrator
Use Case ID:	11
Use Case Name:	submitTicket
Use Case Participants:	all users except administrator
Entry Condition:	user login

Flow of Events	<ol style="list-style-type: none"> 1. User accesses the GS2 desktop application 2. User initiates login 3. Log in menu pops up with User ID and User Password 4. User enters the User ID and Password 5. User will initiate the log in process 6. The log in process, if successful, takes the user to the Main Menu.
Exit Condition:	back, log off, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for all users except administrator to submit a ticket of bugs/glitches/problems with GS2.

RTM Entry:	the administrator can view a full list of any user group and courses
Use Case ID: Use Case Name: Use Case Participants:	12 listsOfStuff administrator and student
Entry Condition:	administrator activates Main Menu
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Administrator will initiate the Lists option
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes

	3. After 10 minutes the user should re log in to view the records
--	---

Rationale: Need of an option for Administrator to view lists of any user group or courses.

RTM Entry:	the administrator can view a full list of any user group
Use Case ID: Use Case Name: Use Case Participants:	13 listsOfFaculty administrator
Entry Condition:	administrator activates Lists option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Administrator will initiate the Lists option 8. Administrator will initiate the Lists of Faculty option
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for Administrator to view lists of any Faculty group in GS2.

RTM Entry:	the administrator can view a full list of any user group
Use Case ID: Use Case Name: Use Case Participants:	14 listOfStuTea administrator
Entry Condition:	administrator activates List of Student Teachers option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password

	<ol style="list-style-type: none"> Administrator enters the User ID and Password Administrator will initiate the log in process The log in process, if successful, takes the student to Main Menu Administrator will initiate the Lists option Administrator will initiate the Lists of Faculty option Administrator will initiate the Lists of Student Teachers option
Exit Condition:	log off, back, or close program.

Entry Condition:	administrator activates List of Departments option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password

	<ol style="list-style-type: none"> 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Administrator will initiate the Lists option 8. Administrator will initiate the List of Departments option
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for Administrator to view a list of all departments.

RTM Entry:	the administrator can add/remove a user
Use Case ID: Use Case Name: Use Case Participants:	18 addUser administrator (registrar will inherit this user case to add/remove students)
Entry Condition:	admin activates Add To List option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. Administrator initiates any List option 8. Administrator will initiate the Add To List option at the top
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for the administrator to add/remove users.

RTM Entry:	add user window
------------	-----------------

Use Case ID:	19
Use Case Name:	addUserGUI
Use Case Participants:	administrator (registrar will inherit this user case to add/remove students)
Entry Condition:	admin activates Add To List option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. Administrator initiates any List option 8. Administrator will initiate the Add To List option at the top 9. If successful, a GUI window to add user will pop up
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an easily assessable window; where the admin can add a user and enter in information regarding the user.

RTM Entry:	the administrator can add/remove a user
Use Case ID:	20
Use Case Name:	removeUser
Use Case Participants:	administrator (registrar will inherit this user case to add/remove students)
Entry Condition:	admin activates Remove option from the drop down menu
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. Administrator initiates any List option 8. Administrator will click on the specific user 9. If successful, a drop down menu would appear

	10. Admin initiates Remove option from the drop down menu
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for Administrator to remove a user in a drop down men

RTM Entry:	<ul style="list-style-type: none"> • the administrator can update any user profile • departments can update any student profile
Use Case ID: Use Case Name: Use Case Participants:	21 updateP administrator and departments
Entry Condition:	administrator activates Update Profile option from the drop down menu
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User initiates any List option that is available to them 8. User will click on the specific user 9. If successful, a drop down menu will appear 10. User initiates Update Profile by clicking it from the drop down menu
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for Administrator and Departments to update different user profiles when something is changed i.e. password, username, fees, and etc.

RTM Entry:	<ul style="list-style-type: none"> • the administrator can view a full list of any user group and courses
------------	--

	<ul style="list-style-type: none"> students can view a list of courses available
Use Case ID: Use Case Name: Use Case Participants:	22 listOfCourses administrator and students
Entry Condition:	administrator or student activates List of Courses option

If successful, a GUI window will pop up allowing the administrator to add a course with its specific information
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of a GUI window available for Admin to add a course. This course will have options for the Admin to enter in course specific information.

RTM Entry:	the administrator can add/remove a course
Use Case ID:	25
Use Case Name:	AdRCourse
Use Case Participants:	administrator
Entry Condition:	administrator activates Remove option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. Administrator will initiate the Lists option 8. Administrator will initiate the List of Courses option 9. If administrator successfully clicks on the course, a drop down menu would appear. 10. Admin will initiate Remove option from drop down menu
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of options for the administrator to remove courses. When there are courses with minor population, this option will give the administrator the option to remove it to make room for other courses.

RTM Entry:	the administrator can update course specific information
Use Case ID:	26
Use Case Name:	AdUCourse
Use Case Participants:	administrator
Entry Condition:	administrator activates Update Course Information option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the Lists option 8. User will initiate List of Courses option 9. If Administrator successfully clicks on the course, a drop down menu would appear 10. Admin will initiate Update Course Information option from the drop down menu 11. If successful, a GUI window of the course and its information will appear
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for the administrator to adjust course description when subjects taught are changed.

RTM Entry:	the administrator can update the calendar of events
Use Case ID:	27
Use Case Name:	AdUCalendar
Use Case Participants:	administrator
Entry Condition:	administrator activates Update Calendar option
Flow of Events	<ol style="list-style-type: none"> 1. Administrator accesses the GS2 desktop application 2. Administrator initiates login 3. Log in menu pops up with User ID and User Password 4. Administrator enters the User ID and Password 5. Administrator will initiate the log in process

	6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the Update Calendar option
Exit Condition:	log off, back, or close program
Quality Constraints	1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: A need for administrators to update semester schedule by changing current event dates and/or adding new event dates.

RTM Entry:	students can add/drop classes
Use Case ID:	28
Use Case Name:	studentAddClass
Use Case Participants:	student
Entry Condition:	student activates the Look-Up Classes to Add option.
Flow of Events	1. Student accesses the GS2 desktop application. 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Look-Up Classes to Add option 8. Student will initiate the Add Class option to the right of each course
Exit Condition:	log off, back, or close program.
Quality Constraints	1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.

Rationale: Need of an option for students to adjust their semester schedule by adding a class.

RTM Entry:	students can add/drop classes
Use Case ID:	29
Use Case Name:	addOrDropClasses
Use Case Participants:	student
Entry Condition:	student logs in

Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application. 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Add/Drop Classes option 8. If successful, a new GUI window will appear
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.

Rationale: Need of an option to add/drop classes in one single interface. Courses can be dropped individually here, or classes can be added on a massive scale.

RTM Entry:	students can add/drop classes.
Use Case ID:	30
Use Case Name:	studentDropClass
Use Case Participants:	student
Entry Condition:	student clicks a class under My Courses
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application. 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Add/Drop Classes option 8. If student signed up for classes already, click on any class 9. If successful, a drop down menu will appear 10. Student will initiate the Drop Class option
Exit Condition:	log off, back, or close program.

Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.
---------------------	---

Rationale: Need of an option for students to adjust their semester schedule by dropping a class.

RTM Entry:	students can add/drop classes
Use Case ID:	31
Use Case Name:	addCourses
Use Case Participants:	student
Entry Condition:	student activates the Add/Drop Classes option.
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application. 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Add/Drop Classes option 8. Student will initiate the Add Courses option after filling in CRN #s in corresponding entry locations
Exit Condition:	log off, back, or close program.
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds. 2. The results can only be available for 10 minutes. 3. After 10 minutes the user should re log in to view the records.

Rationale: Need of an option to add courses on a massive scale.

RTM Entry:	students can view current schedule for this semester
Use Case ID:	32
Use Case Name:	studentViewSchedule
Use Case Participants:	student
Entry Condition:	student activates the View Student Schedule option
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application 2. Student initiates login

	<ol style="list-style-type: none"> 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the View Student Schedule option
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for students to view all available courses in this semester.

RTM Entry:	students can view all available user profiles
Use Case ID:	33
Use Case Name:	studentViewProfile
Use Case Participants:	student
Entry Condition:	student activates the Lists option
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Lists option 8. Student will initiate any List option 9. Once a specific user is reached, student will click on that user 10. If successful, a drop down menu would appear allowing the student to view profile
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for students to view any user profile.

RTM Entry:	students can view and accept the registration agreement
Use Case ID:	34
Use Case Name:	studentViewAgree
Use Case Participants:	student
Entry Condition:	student logs in
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Registration Agreement option 8. If successful, a GUI Window with the registration agreement will pop up 9. Student will initiate the I Agree option after reading the agreement
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for students to read and accept the Registration Agreement. The registration agreement needs to be accepted before student can sign up for classes.

RTM Entry:	students can update emergency contacts
Use Case ID:	35
Use Case Name:	studentUpdateEmer
Use Case Participants:	student
Entry Condition:	Student activates the Update Emergency Contacts option
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application 2. Student initiates Student Login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process

	6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the Update Emergency Contacts option
Exit Condition:	Log off, back, or close program
Quality Constraints	1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for students to actively update emergency contacts. Emergency contacts will be used to contact family or friends in case an emergency event, attack, or notification.

RTM Entry:	students can view final exam schedule
Use Case ID:	36
Use Case Name:	studentViewFinal
Use Case Participants:	student
Entry Condition:	Student activates the View Final Exam Schedule option
Flow of Events	1. Student accesses the GS2 desktop application 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the student to Main Menu 7. Student will initiate the View Final Exam Schedule option
Exit Condition:	Log off, back, or close program
Quality Constraints	1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option where students can view final exam schedule. More often than not, students have no idea what their final exam schedule is (what time is the exam, etc.); this option will help students track their schedule during final week.

RTM Entry:	students can view course completed so far
Use Case ID:	37
Use Case Name:	viewCCourses
Use Case Participants:	Student
Entry Condition:	Student activates view Course Completed option
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the view Courses Completed option
Exit Condition:	Log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of an option for students to see what courses they have taken so far; this prevents taking courses students have already passes again i.e. eliminates duplicity.

RTM Entry:	students can view forms
Use Case ID:	38
Use Case Name:	viewForms
Use Case Participants:	Student
Entry Condition:	Student activates View Forms option
Flow of Events	<ol style="list-style-type: none"> 1. Student accesses the GS2 desktop application 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the view Forms option
Exit Condition:	Log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds

	<ol style="list-style-type: none"> The results can only be available for 10 minutes After 10 minutes the user should re log in to view the records
--	--

Rationale: Need of options for the student to View (specific) Forms. To make things less complex, GS2 needed a use case to categorize other use cases i.e. more use cases will branch off from main use case.

RTM Entry:	students can view apply to graduate form
Use Case ID:	39
Use Case Name:	viewATGF
Use Case Participants:	Student
Entry Condition:	Student activates View Apply to Graduate Form option
Flow of Events	<ol style="list-style-type: none"> Student accesses the GS2 desktop application Student initiates login Log in menu pops up with User ID and User Password Student enters the User ID and Password Student will initiate the log in process The log in process, if successful, takes the user to Main Menu User will initiate the view Forms option User will initiate view Apply to Graduate option
Exit Condition:	Log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> The results should be show within 5 seconds The results can only be available for 10 minutes After 10 minutes the user should re log in to view the records

Rationale: Need for an option for a student to view the apply to graduate form if they seek to graduate.

RTM Entry:	students can view apply to drop from GSU form
Use Case ID:	40
Use Case Name:	viewDropForm
Use Case Participants:	Student
Entry Condition:	Student activates View Apply to Drop Form option
Flow of Events	<ol style="list-style-type: none"> Student accesses the GS2 desktop application

	<ol style="list-style-type: none"> 2. Student initiates login 3. Log in menu pops up with User ID and User Password 4. Student enters the User ID and Password 5. Student will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the view Forms option 8. User will initiate view Apply to Drop option
Exit Condition:	Log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need for an option for a student to view the apply to drop form if they seek to quit school.

RTM Entry:	view teaching schedule
Use Case ID:	41
Use Case Name:	viewTSced
Use Case Participants:	Faculty
Entry Condition:	Faculty activates View Teaching Schedule option
Flow of Events	<ol style="list-style-type: none"> 1. Faculty access the GS2 desktop application 2. Faculty initiates login 3. Log in menu pops up with User ID and User Password 4. Faculty enters the User ID and Password 5. Faculty will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate the View Teaching Schedule option
Exit Condition:	Log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need for an option where faculty can view teaching schedule for this semester.

RTM Entry:	the Department of Financial Aid can view all available financial aid options
Use Case ID: Use Case Name: Use Case Participants:	42 financialVOptions Department of Financial Aid
Entry Condition:	Department of Financial Aid activates view Financial Aid options
Flow of Events	<ol style="list-style-type: none"> 1. Department of Financial Aid accesses the GS2 desktop application 2. Department of Financial Aid initiates login 3. Log in menu pops up with User ID and User Password 4. Department of Financial Aid enters the User ID and Password 5. Department of Financial Aid will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate view Available Financial Aid option
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need for an option for staff in this department to view all available financial aid options to students in one single place; this option eliminates the need of student and staff research for financial aid options.

RTM Entry:	the Registrar can generate a official transcript for a student
Use Case ID: Use Case Name: Use Case Participants:	43 generateTranscript Registrar
Entry Condition:	Registrar activates Generate Transcript option from the drop down menu
Flow of Events	<ol style="list-style-type: none"> 1. Registrar accesses the GS2 desktop application 2. Registrar initiates login 3. Log in menu pops up with User ID and User Password 4. Registrar enters the User ID and Password 5. Registrar will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate List of Students option 8. Registrar will click on any specific student 9. If successful, a drop down menu would appear

	10. From the drop down menu, Registrar will click on Generate Transcript
Exit Condition:	log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need an option for Registrar to create a transcript upon a student request by mail and other means. Once a transcript is created, it will be mailed to the student at a later time.

RTM Entry:	the Department of Parking Services can generate tickets for users that have any violations tied to their account
Use Case ID:	44
Use Case Name:	generateTicket
Use Case Participants:	Department of Parking Services
Entry Condition:	Department of Parking Services activates Generate Ticket option
Flow of Events	<ol style="list-style-type: none"> 1. The Department of Parking Services accesses the GS2 desktop application 2. The Department of Parking Services initiates login 3. Log in menu pops up with User ID and User Password 4. The Department of Parking Services enters the User ID and Password 5. The Department of Parking Services will initiate the log in process 6. The log in process, if successful, takes the user to Main Menu 7. User will initiate Lists option 8. User will initiate any List option 9. User will click on any specific user, if successful, a drop down menu would appear 10. User will initiate the Generate Ticket option
Exit Condition:	Log off, back, or close program
Quality Constraints	<ol style="list-style-type: none"> 1. The results should be show within 5 seconds 2. The results can only be available for 10 minutes 3. After 10 minutes the user should re log in to view the records

Rationale: Need of the Department of Parking Services to actively generate tickets for violations; this helps the university keep order with parking services and higher funding.

Test Cases

Test-case identifier	student login
Feature to be tested	successful login with Student account-type
Feature Pass/Fail Criteria	Pass if the user successfully logs in and is presented the home screen
Entry Condition:	users type in the account username and password on the login screen.
Test Procedure:	<ol style="list-style-type: none"> 1. Users access the GS2 desktop application 2. Users initiate login 3. Log in menu pops up with User ID: 1111 and User Password: 1111 4. User enters the User ID and Password 5. User will initiate the log in process
Data	<ol style="list-style-type: none"> 1. users are read from a 'users.txt' file, and are attempted to be matched with the typed in username/password 2. passwords should be compared in encrypted form
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. Login Successful.

Test-case identifier	admin login
Feature to be tested	successful login with admin account-type
Feature Pass/Fail Criteria	Pass if the user successfully logs in and is presented the home screen
Entry Condition:	users type in the account username and password on the login screen.
Test Procedure:	<ol style="list-style-type: none"> 1. Users access the GS2 desktop application 2. Users initiate login 3. Log in menu pops up with User ID: 1111 and User Password: 1111 4. User enters the User ID and Password 5. User will initiate the log in process
Data	<ol style="list-style-type: none"> 1. users are read from a 'users.txt' file, and are attempted to be matched with the typed in username/password 2. passwords should be compared in encrypted form 3. Account type should be 4 (element 3) in the row of information
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. Login Successful.

Test-case identifier	main menu
Feature to be tested	main menu shown upon log in
Feature Pass/Fail Criteria	Pass if the user successfully logs in and is presented the main menu
Entry Condition:	successful login
Test Procedure:	1. Stack of menu buttons visible
Data	1. JButtons with action listeners
Exit Condition:	log off or close program.
Log:	1. menu shown as expected

Test-case identifier	administrator able to view list of all users
Feature to be tested	admin can view a table of users
Feature Pass/Fail Criteria	pass if admin is shown table of users with buttons on the end to view their profile or delete them
Entry Condition:	1. Logged in as admin 2. on the home screen
Test Procedure:	1. Click "Manage All Users"
Data	1. JTable 2. Read in users from 'users.txt'
Exit Condition:	log off or close program.
Log:	List of users shown as expected

Test-case identifier	main menu
Feature to be tested	main menu shown upon log in
Feature Pass/Fail Criteria	Pass if the user successfully logs in and is presented the main menu
Entry Condition:	successful login
Test Procedure:	1. Stack of menu buttons visible
Data	1. JButtons with action listeners
Exit Condition:	log off or close program.
Log:	1. menu shown as expected

Test-case identifier	student can add classes from table view
Feature to be tested	the ability of a student account to register for classes
Feature Pass/Fail Criteria	Pass if the user successfully adds a class from the table area list of classes
Entry Condition:	users click “look-up classes to add” from the home screen
Test Procedure:	1. Users select “look-up classes to add” 2. click on “add class” on class of choice
Data	1. “users.txt” is read and written to 2. “classes.txt” is read in and altered
Exit Condition:	log off or close program.
Log:	1. users.txt file updates to show classes user is registered in 2. classes.txt file updates to show incremented value of people in class

Test-case identifier	student can add classes from textfield area
Feature to be tested	the ability of a student account to register for classes
Feature Pass/Fail Criteria	Pass if the user successfully adds a class from the text area list of classes
Entry Condition:	users click “add/drop classes” from the home screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users select “add/drop classes” 2. user enters class CRN of choice into one of the text areas 3. click “add courses”
Data	<ol style="list-style-type: none"> 1. “users.txt” is read and written to 2. “classes.txt” is read in and altered
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. users.txt file updates to show classes user is registered in 2. classes.txt file updates to show incremented value of people in class

Test-case identifier	students cannot register for more than 5 classes
Feature to be tested	restriction of # of classes able to be registered for
Feature Pass/Fail Criteria	pass if user is notified of attempting to add more than 5 classes
Entry Condition:	users click “look up classes to add” from the home screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users select “look up classes to add” 2. user adds 6 classes of choice 3. on the sixth attempt a popup should tell the user that you aren’t allowed more than 5 classes
Data	<ol style="list-style-type: none"> 1. “users.txt” is read and written to 2. “classes.txt” is read in and altered 3. JTextPane for the popup window
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. popup is successfully shown

Test-case identifier	student cannot register for class if agreement hasn't been agreed to
Feature to be tested	cannot add classes if agreement hasn't been agreed to
Feature Pass/Fail Criteria	pass if user is notified of inability to register due to agreement hold
Entry Condition:	users click "look up classes to add" from the home screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users select "look up classes to add" 2. user adds 1 class 3. popup should show saying they haven't agreed to the agreement yet, so they can't register
Data	<ol style="list-style-type: none"> 1. "users.txt" is read and written to
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. popup is successfully shown

Test-case identifier	student agrees to agreement
Feature to be tested	agreeing to agreement
Feature Pass/Fail Criteria	pass if user is successfully updated in "users.txt" file to show they have agreed to the agreement
Entry Condition:	users click "Registration Agreement" from the home screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users selects "Registration Agreement" 2. User should read the agreement here 3. User selects "I agree"
Data	<ol style="list-style-type: none"> 1. "users.txt" is read and written to
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. users.txt file now shows that the user has agreed (no changed into yes)

Test-case identifier	student can register for classes after agreement is agreed to
Feature to be tested	ability to register after agreement agreed to
Feature Pass/Fail Criteria	pass if user is successfully updated in "users.txt" file to show they have classes registered for
Entry Condition:	users click "look up classes to add" from the home screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users selects "look up classes to add" 2. User attempts to add any class
Data	<ol style="list-style-type: none"> 1. "users.txt" is read and written to
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. users.txt file now shows that the user has classes registered for

Test-case identifier	student can view their own schedule
Feature to be tested	student schedule view
Feature Pass/Fail Criteria	pass if user is successfully shown a table without borders of their classes and who is teaching them
Entry Condition:	users click "View Student Schedule" from the home screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users selects "View Student Schedule"
Data	<ol style="list-style-type: none"> 1. "users.txt" is read
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. user is shown a table of what classes they are in and who is teaching them

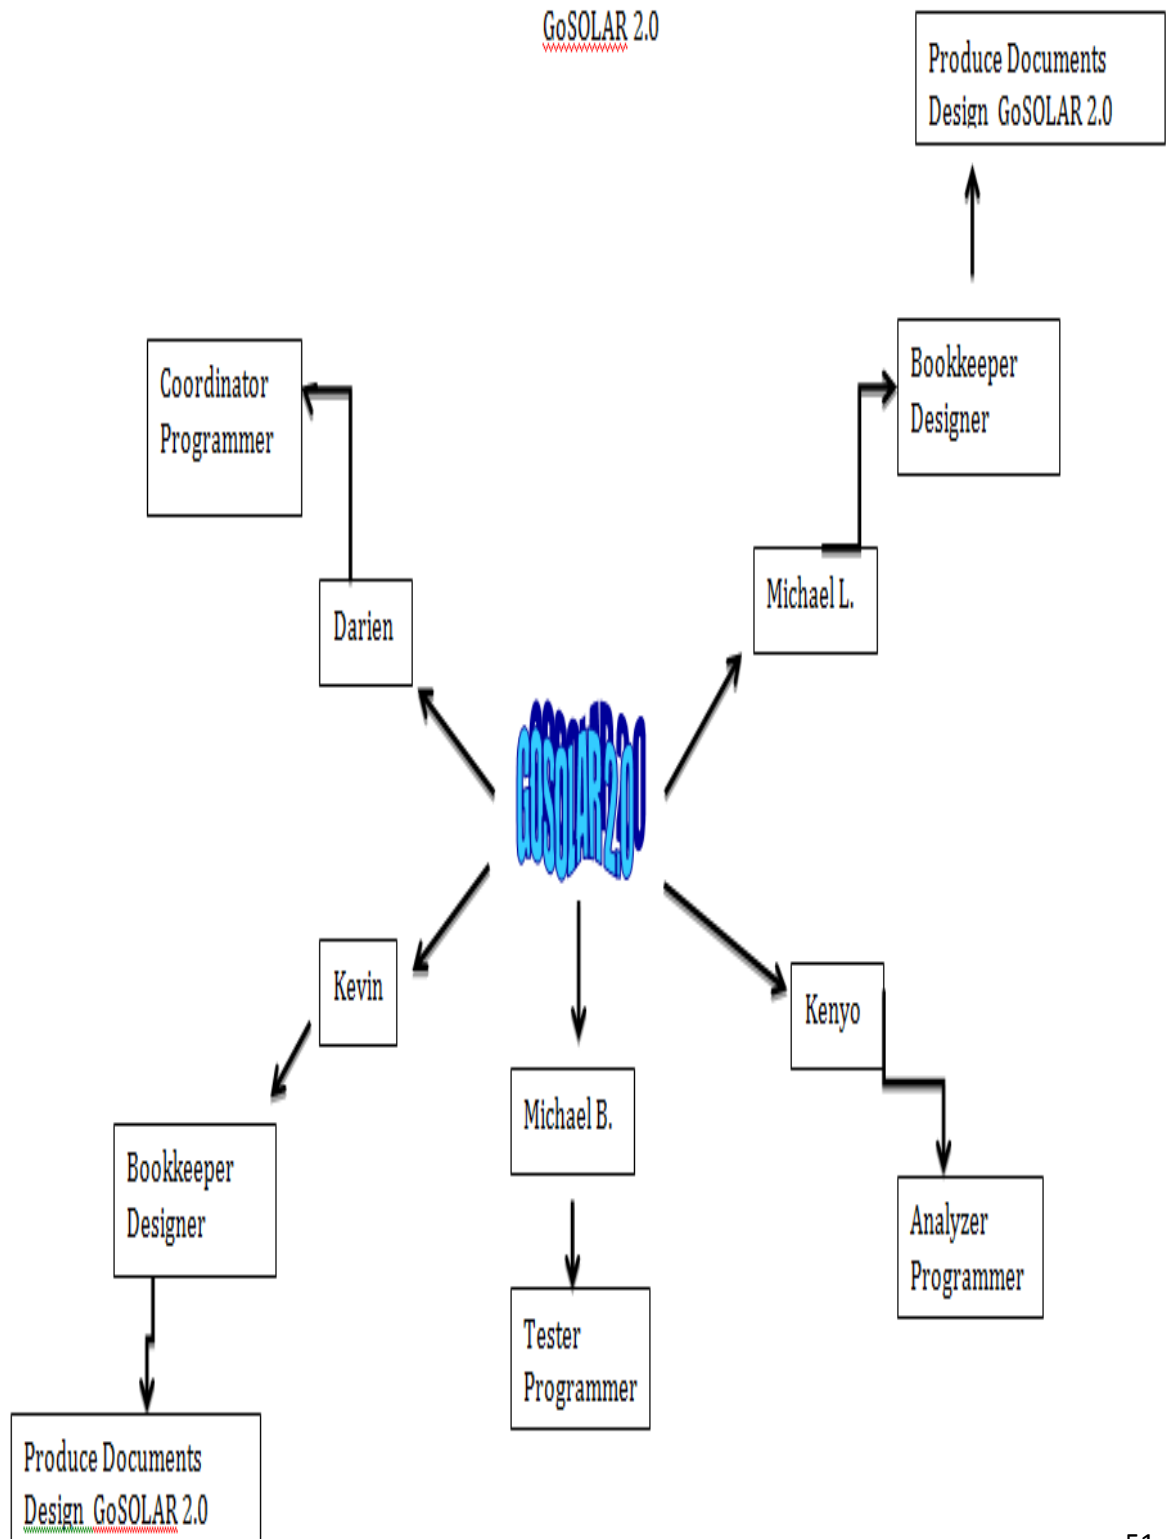

Test-case identifier	user account creation
Feature to be tested	creating a user account
Feature Pass/Fail Criteria	pass if user account is successfully made and is shown in the users.txt file
Entry Condition:	users click “New User” from the login screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users selects “New User” from the login screen 2. User enters username of choice 3. User enters password of their choice 4. User enters their student id 5. User selects “submit”
Data	<ol style="list-style-type: none"> 1. “users.txt” is read and written to
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. users.txt file now shows that the user has been created (account type should be 0, and agreement should say ‘no’)

Test-case identifier	password encryption
Feature to be tested	encrypting user passwords
Feature Pass/Fail Criteria	pass if password is saved as an encrypted key in the users.txt file
Entry Condition:	users click “New User” from the login screen
Test Procedure:	<ol style="list-style-type: none"> 1. Users selects “New User” from the login screen 2. User enters username of choice 3. User enters password of their choice 4. User enters their student id 5. User selects “submit”
Data	<ol style="list-style-type: none"> 1. “users.txt” is read and written to 2. PasswordService.java is used to encrypt the String
Exit Condition:	log off or close program.
Log:	<ol style="list-style-type: none"> 1. users.txt file now shows their password to be an encrypted String

Function Point Cost Analysis

User	Total Functions
Administrator	58
Registrar	32
Faculty	7
Students	53
Financial Aid	36
Parking Services	10
General Functionality	115

2.1 Administrator

- 2.1.1 The administrator shall be able to log in. – 2 functions
- 2.1.2 The administrator shall be able to add/remove students. – 4 functions
- 2.1.3 The administrator shall be able to add/remove faculty. – 4 functions
- 2.1.4 The administrator shall be able to add/remove a department. – 4 functions
- 2.1.5 The administrator shall be able to update faculty profile. – 15 functions
- 2.1.6 The administrator shall be able to update student profile. – 15 functions
- 2.1.7 The administrator shall be able to add/remove a course. – 4 functions
- 2.1.8 The administrator shall be able to update course specific information. – 2 functions
- 2.1.9 The administrator shall be able to change administrative password. – 3 functions
- 2.1.10 The administrator shall be able to update the calendar of events. – 5 functions

2.2 Registrar

- 2.2.1 The registrar shall be able to log in to the department account. – 2 functions
- 2.2.2 The registrar shall be able to update student profiles. – 15 functions
- 2.2.3 The registrar shall be able to update department profile. – 15 functions

2.3 Faculty

2.3.1 Instructors

- 2.3.1.1 Instructors shall be able to view teaching schedule. – 2 functions
- 2.3.1.2 Instructors shall be able to log in. – 2 functions

2.3.2 Student Teachers

- 2.3.2.1 Student Teachers shall be able to view teaching schedule. – 2 functions
- 2.3.2.2 Student Teachers shall have access to all functions of a normal student. – 1 function

2.4 Students

- 2.4.1 Students shall be able to log in. – 2 functions
- 2.4.2 Students shall be able to add/drop classes. – 5 functions
- 2.4.3 Students shall be able to pay fees via Payment and Fees. – 5 functions
- 2.4.4 Students shall be able to view classes offered this semester. – 2 functions
- 2.4.5 Students shall be able to view current schedule for this semester. – 2 functions
- 2.4.6 Students shall be able to update student profile. – 15 functions

- 2.4.6.1 Students shall be able to update emergency contacts. – 2 functions
- 2.4.6.2 Students shall be able to update phone numbers. – 2 functions
- 2.4.6.3 Students shall be able to update current mailing address. – 2 functions
- 2.4.7 Students shall be able to view final exam schedule. – 2 functions
- 2.4.8 Students shall be able to view course completed so far. – 3 functions
- 2.4.9 Students shall be able to view forms. – 3 functions
- 2.4.9.1 Students shall be able to view apply to graduate form. – 4 functions
- 2.4.9.2 Students shall be able to view apply to drop from GSU form. – 4 functions

2.5 Department of Financial Aid

- 2.5.1 The department of financial aid shall be able to log in to the department account. – 2 functions
- 2.5.2 The department of financial aid shall be able to update student profiles. – 15 functions
- 2.5.3 The department of financial aid shall be able to update department profile. – 15 functions
- 2.5.4 The department of financial aid shall be able to view all available financial aid options. – 4 functions

2.6 Department of parking services

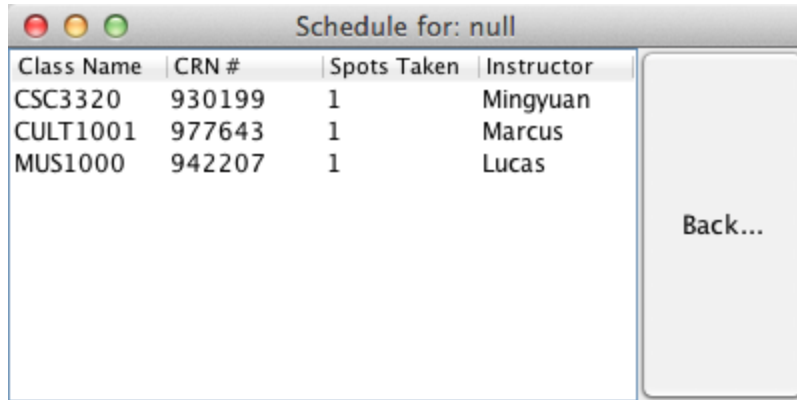

- 2.6.1 The Department of Parking Services shall be able to update any user profile. – 5 functions
- 2.6.2 The Department of Parking Services shall be able to generate tickets for users that have any violations tied to their account. – 5 functions

3.0 General Functionality

- 3.1 GS2 shall have options to back to previous location, back to main menu, log off, and quit program functions. – 3 functions
- 3.2 GS2 shall have a main menu. -20 functions
- 3.3 GS2 shall contain a help option. – 2 functions
- 3.4 Payment and Fees
 - 3.4.1 Balance
 - The software shall keep track of a student's balance. – 2 functions
 - 3.4.2 Payment Options
 - The student shall be able to pay by credit card, cash, money order, or check. – 4 functions
 - 3.4.3 The student shall be able to receive a refund when balance (3.4.1) is negative. – 10 functions
 - 3.4.4 The student shall be able to pay for all fees from all departments in one single interface called "Payment and Fees". – 15 functions
- 3.5 User Profiles

- All users, except administrators, shall have a profile. – 7 functions
- 3.5.1 All users, except administrators, shall be able to customize their own personal profiles. - 15 functions
- 3.5.2 These profiles shall be able to be visible by anyone. – 2 functions
- 3.5.3 Student profiles shall include name, age, major, preferred email, place of origin, gender, and phone number. - 8 functions
- 3.5.4 Faculty Profile
 - 3.5.4.1 Instructor profile shall include name, age, area of research, preferred email, place of origin, schools attended, gender, and phone number. – 9 functions
 - 3.5.4.2 Student teacher profile shall include name, age, area of research, preferred email, gender, phone number. – 7 functions
- 3.5.5 Department profiles shall include name of the department, department email, location on campus, website address, and phone number. – 6 functions
- 3.6 Calendar
 - GS2 shall contain a calendar of events on user login screen. – 5 functions

Glossary:

Exit	Leaves the program completely via alt+f4, exit box, or other means. This resets program and closes it.
Log Off	Signs the current user out, and backs the interface to the login screen.
Back	A function that takes user back to the original location.
Avatar	a picture or chosen figure that represents the actor.
Users	people that are part of the university system, and they have access to all the assets and/or privileges provided by the university. Users in GoSOLAR 2.0 include the administrator, faculty/staff, instructors, and students.
Profile	a menu of various information on a specific user. An administrator can see all information on any student profile; however, students can see only see non-private information like email, website, social media, and etc. Also, a profile contains all information that is on a user's record.
Registrar	the Office of the Registrar supports the academic goals of the University and processes that directly affect our students faculty and staff. Provides services for students, faculty and staff related to registration, grading, enrollment certification, academic record and transcript maintenance, degree certification and classroom scheduling.
Administrator (admin)	person that manages the different operations of GoSOLAR 2.0. Some of the admin's job includes maintenance, user profile and general information updates.
Department of Financial Aid	helps students find affordable ways to pay for their education, and different options students can take.
Department of Parking Services	helps students find parking options for the various vehicles they might drive. Also, general information about parking/tickets can be found in their website.
Courses	classes that is currently available for students to take in the current semester. A course may have prerequisite courses that must be completed; this is to make sure that the student has sufficient knowledge to actively participate and succeed in the course they are seeking to take. For necessary

	advancement to a high-level course, a passing grade of 70% or C is required.
Instructor	university faculty that are designated by their specific department to teach a specific course or multiple courses.
Student Teacher	university faculty that are designated by their specific department to teach a specific course or multiple courses. Also, student teachers take classes. In most cases, these students need to teach a course(s) to complete their dissertation.
Administrative Action	special powers granted to admin(s) on GoSOLAR 2.0. These included server updates/maintenance, add/drop powers, and etc.
Fees	any fees including institution, transportation, technology, sustainability, student center, facility, recreation, library facility, international education, health, athletic, activity, and etc.
Desktop Application	An application that runs by itself on a desktop or laptop computer. Users will need to go on a website initially to download and install the application. Then the users can access it via an icon on the PC.
GoSOLAR 2.0	a University portal designed to give students, faculty and staff personalized access to wide-ranging campus resources in a single location.
Calendar of Events	a calendar of all events, important dates, university holidays, and etc. in the current semester.
Withdraw	after the first week of school, students can choose to withdraw from a class at which time will end up with a grade of W in that class. All undergraduate students can withdraw up to six times.
Undergraduate Student	any student that has not received his or her first bachelor's degree.
Graduate Student	any student that has received his or her first bachelor's degree; the number of hours taken does not matter.
Freshman	all undergraduate students with 0-29 semester hours

Sophomore	all undergraduate students with 30-59 semester hours
Junior	all undergraduate students with 60-89 semester hours
Senior	all undergraduate students with 90 or more semester hours
Problem Ticket	a report of any bug, glitch, or problems in GoSOLAR 2.0 portal to the administrator.
